

CONTAMINATED WASTE BAGS

PRODUCT INFORMATION SHEET

Overview

SpillSmart Contaminated Waste Bags are designed for the safe containment and disposal of waste generated during spill response. Clearly marked and highly durable, they help ensure contaminated materials are handled and disposed of correctly.

Features

- Clearly labelled for contaminated waste identification
- Heavy-duty polyethylene construction
- Strong and chemical resistant
- Supports safe handling and disposal
- Easy to seal and secure
- Reduces risk of cross-contamination

Description

SpillSmart Contaminated Waste Bags are engineered to ensure that waste generated during spill clean-up is managed safely and correctly.

Clearly marked with "Contaminated Waste", the bags help prevent misidentification and ensure materials are not incorrectly disposed of as general waste.

Manufactured from heavy-duty polyethylene, the bags provide excellent strength and chemical resistance, making them suitable for a wide range of contaminated materials.

Designed for practical use, the bags should be filled to approximately three-quarters capacity to allow sufficient space for secure sealing using cable ties or similar fasteners.

By supporting correct waste handling procedures, these bags play an essential role in completing the spill response process and maintaining compliance with environmental regulations.

DESIGNED FOR:

- Spill clean-up waste containment
- Hazardous material disposal
- Industrial and workshop environments
- Spill kits and response systems
- Compliance-driven waste handling

SPECIFICATIONS:

- Heavy-duty polyethylene construction (150UM)
- Clearly printed contaminated waste labelling
- High chemical resistance
- Size: 450mm x 720mm
- Suitable for secure sealing with cable ties
